

Kentish Flats offshore wind farm

2011

Kentish Flats offshore wind farm required additional works to ensure continued successful operation. Osiris provided diving personnel to aid the remedial burial of cable.

Osiris successfully carried out remedial cable burial in an area where reaching required cable burial depth was expected to be difficult. To help protect the cables that couldn't reach the required depths, rock filled net gabions were prepared.

In addition to continual diving support, Osiris provided a tower access and a confined space team to act as emergency response units and support for personnel installing strain gauges within the tower structures.

Services

- Remedial cable burial
- Cable protection works
- General diving services
- Confined space entry
- Confined space rescue
