

Celtic Sea Case Study

Diving & ROV

In summer 2013, Fendercare Marine was contracted to assist in the inspection of the subsea structure of Kinsale A platform, one of Ireland's longest established gas production platforms.

Who

PSE Kinsale Energy

Summary

The team carried out a wide range of examinations to ensure the safety of its structure, ranging from general visual inspection of the platform through to close visual inspection of individual welds, including removal of extensive marine growth.

Services Provided

- Inspection diving services
- Visual inspection of individual welds
- Underwater video photography
- Marine growth cleaning

Benefits Delivered

- Ensuring integrity and safety of platform subsea structure
- Reduced operational risks and maintenance costs
