

East West Interconnector Project

2012

Osiris Marine Services mobilised the DP1 barge, the Atlantis, with a full survey/ROV/diving/cable repair spread and mass flow excavation tool.

EirGrid's East West Interconnector Project (EWIP) was the installation of the electricity link between Ireland and Britain. The project involved the installation of two HVDC and a fibre optic cable 186kms along the Irish Sea bed securing energy for the future and also giving Ireland's expanding wind power networks the opportunity to export energy to the UK.

Osiris' remedial work scope consisted of deburying and repairing the fibre optic cable at two points along with the installation of 94 subsea mattresses at different points along the entire cable route.

“Taking all the challenges caused by seabed and weather conditions during the execution of work into account, NSW made the right selection of subcontractor. Osiris Marine Services convinced by high performance, flexibility on site conditions as well as good maintained and up to date equipment.”

Alexander Bornemann, Project Manager from NSW

Services

- Cable installation
- Cable deburial and repair
- Subsea mattress installation
