

Olympic success

Case Study

The 2012 London Olympics were an integral part of that summer, and James Fisher Nuclear (JFN) were proud to play their own part in providing support to the games.

James Fisher Inspection and Measurement Services (JFIMS), an operating division of JFN, provides inspection and measurement services for the nuclear, defence, homeland security, aerospace, offshore and other industries.

The core business of JFIMS is the measurement and application of radiation, and this expertise meant they were ideally placed to carry out this contract with the Olympic Delivery Authority.

JFIMS Project Manager Dave Brown commented: "The programme delivery schedule was challenging. It was made more difficult still by extremes of temperature and one of the wettest summers in recent years. However, despite all our difficulties, we have successfully completed all delivery and installation work on budget and in time for the games."

Who

Olympic Delivery Authority

Summary

- JFIMS successfully delivered radiological detection monitors to the Olympic Delivery Authority

Services provided

- The JFIMS team has been extremely successful with long-term partners in the supply, installation and maintenance of a comprehensive suite of radiological detection equipment to a wide range of customers throughout the UK
- The successful delivery for this important project lent further credence to the track record of JFIMS

Benefits delivered

- On-site installation team backed up by projects and logistics support
- Extensive use of JFN's own Deeside calibration facility to test and prove all of the instrumentation prior to shipping
